

KNOW BEFORE YOU GO®

## Command Monitoring Station

*Providing an Integrated Response  
During Tactical Operations*

### THE RECON SCOUT® COMMAND MONITORING STATION (CMS)

enables your command post to monitor video transmissions from any Recon Scout reconnaissance robot, from up to 1,000 feet (304.8m) away.<sup>1</sup> By using the CMS, you can see precisely what your frontline personnel see on their handheld Operator Control Units (OCU) as they direct the movement of their robots. This real-time video lets you direct tactical and search-and-rescue operations and provide an integrated response to any situation.

The CMS also allows you to switch from one robot frequency (channel A, B or C) to the next so you can monitor video transmissions from up to three robots. Software included with the CMS allows you to use a computer<sup>2</sup> running Windows XP™ or Vista™ to record up to two hours of video and to capture and store still images as required. You can also use a standard RCA cable<sup>3</sup> to display the video feed on any television or monitor. Power cables are included that enable you to run the CMS from a standard power outlet or a 12VDC source.

1. Actual range will vary with terrain/environment.

2. Computer for capture not included. It is recommended to have at least 5 GB of free hard drive space for recording video.

3. RCA cable not included with the kit.

### Mechanical Specifications

Range: Up to 1,000ft/304.8m<sup>1</sup>

Video Resolution: 640 x 480

Input Voltage: 120/240V, 50-80Hz or 12VDC

### Minimum System Requirements

Pentium™ 4 Processor, 1 GHz or Faster (2.5 GHz recommended)

128MB of RAM (1GB of RAM recommended)

Microsoft Windows XP™ with SP1 or Above

### Included Components

- High-Gain Yagi Antenna
- Tripod and Mount
- 10ft/3.04m and 30ft/9.14m Connecting Cables
- Video Receive Module with USB and RCA Interface
- Software
- Wall Power Cable
- Automotive Power Cable
- User Manual
- USB Cable
- Carrying Case
